

Learning With Technology At Little Flower Catholic School

Students At Little Flower Catholic School are actively involved in their lessons with a new interactive learning system the school has recently integrated in their classes called Senteo Interactive Response System. With this technology, all students actively participate with every question the teacher asks through hand-held devices that interact with a Smart Board that is installed in each classroom at the school. Little Flower School is committed to providing a high quality education that integrates technology and appeals to various learning styles. Students regularly participate in lessons on the Smart Board, on individual laptops, and now with the Senteo system. Teachers are now able to assess each student's mastery level the moment they answer a question and can adjust their curriculum objectives and provide feedback to students immediately. Students and teachers alike are excited about learning and instruction at Little Flower Catholic School.
